

Perform Series -Pant Perform-

Innovative **PANT PERFORM** : Grand Prix making-up

The problem with the creases is even more noticeable in the **PANT**, specially in the knees and the groin region. To prevent creases from forming, Aldo Drudi, the designer, has applied the same technique used for the Grand Prix pilot's leather overalls: a perfect combination of elastic areas and the strategic position of the seams that act as tensile.

The groin region of **PANT** is made by a pattern consisting in several elastic pieces and the specific position of the seams which avoids creases by maintaining the fabric in tension.

The shape of the bag of the bottom region has been stressed so as to adapt the **PANT** to the habitual Z position the motorcyclist takes. It also prevents the belt from moving. This solution and the **TOP**'s tail protect the lumbar region.

Knees are a tension area when folding. In order to diminish this effect, **PANT** has been added an anatomic pre shaped knee guard.

In order to guarantee a perfect adaptation to riding position and to avoid the fabric to tear, the back part of the legs has been made up with three pieces and with oblique seams in the calf.
